WASTECYKLER MODELS ACCORDING TO THEIR AREAS OF USE

B. Horizontal Transport Model with Chimneyless Ropeway System

Areas of Use;

Models where the garbage can is automatically carried horizontally for villas, garden houses, double-storey buildings, single-storey buildings.

Since there is no garbage room in these models, the garbage cans are in the garden or farther from the houses, the transportation problem of people causes serious difficulties especially for the elderly. **WASTECYKLER** automatically carries and separates your garbage without leaving your home. With these features, it prepares more comfortable, more convenient, environmentally friendly and more hygienic living environments.

A chimneyless waste transportation system that reaches the garbage bins without leaving home

DISCOVER WASTECYKLER

Current garbage transportation and waste separation systems have many problems.

For example;

- Garbage is carried away from living spaces by arm and body power.
- But WASTECYKLER does not carry your garbage and waste with arm and body strength, it carries your garbage and waste with a single button.

- Garbage is transported from living spaces in an unhygienic and unhealthy manner.
- But WASTECYKLER carries garbage and waste in an extremely healthy and hygienic way.

1[✓]
Minute

- Existing garbage covers cause many bacteria and viruses to spread. This causes it to spread more quickly, especially in allergy sufferers.
- But you don't have to open the WASTECYKLER wastegate. The system will open itself.

- Current systems waste a lot of time, minimum 5-10 minutes.
- But WASTECYKLER can easily and comfortably handle it in a few seconds.

- Existing systems contribute very little to the environment with 10% recycling.
- But WASTECYKLER is an environmentally friendly system with minimum 95% recycling.

- It is also harmful in terms of energy loss in existing systems. For every waste, a vehicle wastes energy in traffic and causes air pollution.
- But WASTECYKLER carries 6 types of waste together with a single vehicle. This technology also provides energy saving with minimum electricity consumption and low voltage electricity usage.

Who will throw away the garbage today?

Did you forget! We have WASTECYKLER that no one will carry.

WASTECYKLER MODELS ACCORDING TO THEIR AREAS OF USE

A. Vertical Conveying Model with Vent

Areas of Use;

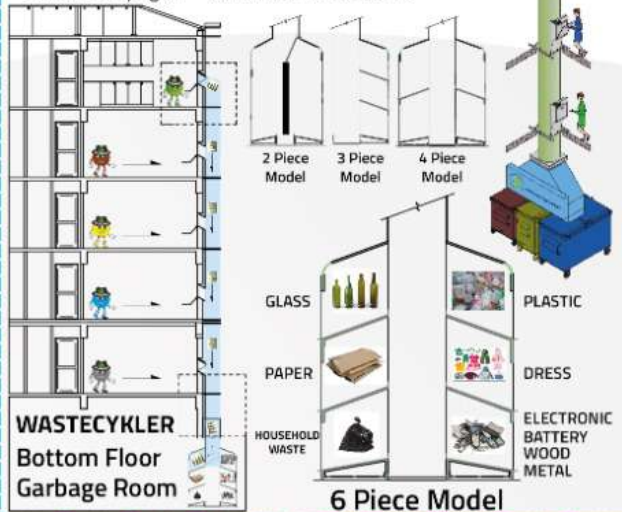

Models with high-rise buildings, skyscrapers, apartments, hospitals, universities and garbage rooms on the ground floor. In these models, the desired number of garbage types can be easily separated by a single chimney in the common use area on each floor. The waste is sent to the garbage room by free fall along the chimney and automatic separation is done. This system is a hygienic WASTECYKLER model that can be washed automatically or manually at certain periods.

Remove your waste from your living space with just one click, without carrying it.

It takes your waste oils and prevents water pollution. These oils are converted into **biodiesel**.
